High-End Moisture in Oil Sensor

EE360

High-End Moisture in Oil Sensor

EE360 is dedicated for reliable monitoring of lubrication, hydraulic and insulation oils as well as diesel fuel. In addition to highly accurate measurement of water activity (aw) and temperature (T), EE360 calculates the absolute water content (x) in ppm.

Measurement Performance

The EE360 employs high-end E+E humidity sensing elements manufactured in state-of-the-art thin film technology, which are the prerequisite for outstanding measurement accuracy.

Process Connection

The sensing probe can be employed up to 180 °C (356 °F), 20 bar (290 psi) and is available with either ISO or NPT slide fitting, which allows for variable immersion depth. Using the optional ball valve, the probe can be mounted or removed even without process interruption.

Enclosure

The EE360 features an IP65/NEMA 4X polycarbonate or stainless steel enclosure which facilitates installation and maintenance. The enclosure can accommodate a 100 - 240 V AC supply unit or various extension modules.

Display and Outputs

The measured data is available on two analogue outputs, on the RS485 (Modbus RTU) or Ethernet-PoE (Modbus TCP) interface and on the alarm (relay) outputs.

The TFT colour display shows up to four measurands simultaneously and offers extensive setup and diagnosis features. The data logging function saves up to 20 000 measured values for each physical quantity. The logged data can be displayed graphically directly on the device or easily downloaded via the USB interface.

Configurable and Adjustable

The configuration and adjustment of the EE360 can be performed either using the display and the push buttons or with the free E+E PCS10 Product Configuration Software via the USB interface.

EE360 with stainless steel enclosure

EE360 with polycarbonate enclosure

Features

3.5" TFT colour display

- Shows up to 4 measurands simultaneously
- Layout and measurands freely selectable
- Data logger for 20 000 values per measurand
- Logged data shown graphically
- Diagnosis functions
- Intuitive device setup with push buttons

Enclosure

- IP65/NEMA 4X protection rating
- Polycarbonate or stainless steel
- Easy mounting and service
- Screws secured in cover

USB service interface

- Download logged data
- Perform configuration, adjustment and firmware update
- 4 status LEDs

Outputs

- 2 analogue outputs current/voltage
- Error indication according NAMUR
- Modbus RTU/Modbus TCP
- 2 alarm outputs
- Configurable via display or software

Ball valve set

- Probe mounting and removal without process interruption

Probe

- Oil temperature -40...+180 °C (-40...+356 °F)
- Pressure tight up to 20 bar (290 psi)
- ISO or NPT process connection
- Pluggable probe option

Inspection certificate

According to DIN EN 10204-3.1

Features

Water activity a_w / Water content x

The moisture in oil can be expressed in absolute or relative terms.

Water activity a_w is the relative measure for moisture in oil. It represents the ratio between the actual amount of dissolved water and the maximum possible amount of dissolved water in the oil at a certain temperature. Independently of the oil type, the water activity shows how close to saturation is the oil at any moment in time.

- $a_w = 0$ indicates completely dry oil
- $a_w = 1$ indicates fully saturated oil

EE360 measures directly the water activity.

Water content x is an absolute measure equal to the amount of water in the oil. The water content is measured in ppm (parts per million) and is independent from the oil temperature. For assessing how far is the oil from saturation, x must be regarded together with T .

EE360 calculates x out of the measured a_w and T values. The calculation is oil dependent and requires a set of oil specific parameters.

Sensor Leads Protection

In certain applications, the oil can become corrosive over time, for example due to continuous contamination of lubricating oils by salt water in the maritime environment. In such demanding applications, the E+E proprietary protection of the sensing element leads can significantly extend the service life of the sensor.

Output 2 scaling high	Value	SBHValue	
Oil parameterization for water content calculation	Mineral transformer oil	No code	
	Customer specific oil	PPMxxx ⁵⁾	

1) Only with polycarbonate enclosure.

2) No combination of alarm output (AM2), Ethernet module (J4) and integrated power supply (AM3) is possible.

3) Integrated power supply includes 2 plugs for power supply and outputs, other plug options are not possible.

4) Both analogue outputs shall be either voltage or current.

5) Procedure for customer specific oil (see table below).

Ordering Guide

5) Procedure for customer specific oil

Option	Description	Code
Oil number is known	Replace the xxx by the corresponding number	
Obtaining new oil parameters via oil analysis	Contact and provide E+E HQ the datasheet of the oil before sending us 2 litres of oil. After determination of the oil specific parameters, the corresponding oil number is available, insert this in place of the xxx .	Oil-ppmcal
Obtaining new oil parameters via saturation curve	Contact and provide E+E HQ the datasheet of the oil together with the saturation curve. After calculation of the oil specific parameters, the corresponding oil number is available, insert this in place of the xxx .	Oil-calc

Order Example

EE360-D2J3GA3GB3SBL-40SBH180

Feature	Code	Description
Enclosure material	No code	PC (Polycarbonate)
